GABRIEL C. LAMARRE

Operations Analyst | Process Optimization, KPI Management & Data-Driven Decision Making

(917) 329-5586 | Glamarre257@gmail.com | www.linkedin.com/in/gabrielclamarre | https://glamarre0309.github.io/Portfolio/
New York, NY

SUMMARY

Operations Analyst with 5+ years of experience improving workflows, optimizing performance, and driving operational efficiency across service and financial environments. Proven track record of increasing revenue, improving response times, and enhancing service consistency through data analysis and process optimization. Skilled in SQL, Excel, and Tableau to translate business data into actionable insights and measurable outcomes.

EXPERIENCE

Short-Term Rental Operations Coordinator | Airbnb

STA Property Management Group

10/2021 - 01/2026 New York, NY

Short-term rental management company specializing in Airbnb operations, pricing optimization, and guest experience.

- Owned operational performance and revenue optimization across a multi-property Airbnb portfolio generating **$100K+** annually with **89%+** occupancy.
- Analyzed booking patterns, pricing trends, and occupancy data to improve revenue performance and demand utilization.
- Identified workflow inefficiencies and implemented standardized processes, reducing response times by **25–35%**.
- Monitored and managed KPIs including revenue, occupancy, and guest satisfaction **(4.8 rating)** to ensure consistent performance.
- Collaborated with cross-functional stakeholders to improve service delivery consistency to **95%+**, reducing operational variability.
- Designed and implemented SOPs to improve scalability, reduce manual errors, and streamline day-to-day operations.

Stockbroker

National Securities / Forte Capital

11/2017 - 06/2019 New York, NY

Brokerage firm offering trading, investment services, and compliant transactions.

- Managed and tracked **32+** monthly financial transactions as structured operational workflows, ensuring **100%** accuracy, timeliness, and regulatory compliance across all executions.
- Managed and executed **30+** monthly financial transactions with **100%** accuracy and compliance across operational workflows.
- Gathered and translated business and compliance requirements across **20+** stakeholders to improve execution efficiency.
- Identified workflow inefficiencies and improved transaction turnaround time through process optimization.
- Built KPI-driven reports and dashboards to support leadership decision-making and regulatory audits.
- Coordinated across trading, compliance, and operations teams to streamline documentation and execution processes.

EDUCATION

Business

NYU School of Professional Studies

10/2015 - 06/2017

CERTIFICATIONS

Coursera

Google Data Analytics Professional Certificate

Coursera

IBM Data Analyst Professional Certificate

Coursera

TOOLS

Google Sheets | Excel | SQL | Tableau | Power BI | R (Programming Language) | Python

CORE COMPETENCIES

Process Improvement | Root Cause Analysis | Business Intelligence | Communication | KPI Tracking | Workflow Optimization | Continuous Improvement | Process Optimization | Agile | Waterfall | Business Process Modeling | SOPs | Reporting | Cross-Functional Collaboration

PROJECTS

Airbnb Revenue and Pricing Optimization Analysis

01/2026 New York, NY

Analyzed Airbnb booking data to identify revenue drivers and optimize pricing and occupancy performance.

- Analyzed **300+** booking records to evaluate revenue performance and occupancy trends across a portfolio generating **$100K+** annually with **89%+** occupancy.
- Built an interactive Tableau dashboard tracking booking distribution, revenue contribution, and contribution margin by listing.
- Identified that short-term stays (1–2 nights) represented **56%** of bookings but only **31%** of total revenue, flagging a significant efficiency gap.
- Found that longer stays generated **40%** higher revenue per booking, recommending a shift toward higher-value booking segments.

Telecom Churn Analysis

02/2026 New York, NY

Analyzed customer data to identify key drivers of churn, segment high-risk customers, and develop data-driven strategies to improve retention.

- Analyzed **7,000+** telecom customer records using SQL, Excel, and Tableau to identify key drivers of churn and customer retention patterns.
- Built an interactive Tableau dashboard to track churn rate **(26.5%)** and analyze customer lifetime value (LTV) across segments.
- Identified high-risk segments, including month-to-month customers **(42% churn)** and early-tenure users **(47–50% churn)**, while highlighting a trade-off between higher LTV and increased churn risk.
- Crafted data-driven retention strategies: incentivized contracts, enhanced onboarding, and high-value client targeting.

Improving Service Operations Efficiency: A Verizon Case Study

2026 - Present New York, NY

Led an operations project using custom datasets to assess delivery, warehouse, and fulfillment efficiency.

- Analyzed 3,000+ operational records to evaluate delivery performance, identifying key inefficiencies across warehouses and shipping methods.
- Conducted root cause analysis (5 Whys) to investigate delivery delays, uncovering that inventory shortages and underperforming warehouse operations were primary drivers of late shipments.
- Built an interactive Excel dashboard to track KPIs including on-time delivery rate, average delivery time, and order volume, enabling real-time performance monitoring.
- Identified that Warehouse B underperformed in on-time delivery, driving a disproportionate share of delays and highlighting a need for operational process improvements.
